

COOPERATIVE ECONOMIC INSECT SURVEY REPORT
Glenn A. Salsbury, Survey Entomologist

Report 13, Volume 57
November 9, 2009

STRIPED EARWIG: Found in a greenhouse in Montgomery County. This is the first known occurrence of this insect in Kansas. It is considered to be a predator.

FIRE ANTS: The one colony found at the greenhouse in Coffeyville has been eradicated.

A WEEVIL: The weevil, *Magdalis austera*, was found in Crawford County and represents a new county record. This species is a minor pest of Scotch and white pine.

FALL ARMYWORM: Moths continue to fly on warm nights. It is probably too late in the season for this pest to cause any damage to wheat or alfalfa.

MEALYBUGS: Found on mandevilla at a retail outlet.

SCALE: Found on palms at a retail outlet.
